About

I am a result oriented person. A determined self-taught, I acquired my knowledge with discipline and dedication. Communicative and open to collaboration, I aim to develop genuine relationships in my field of interest.

Skills

JavaScript (ES6) | TypeScript | React | Redux Toolkit | Git | GitHub | SWR | ReactQuery | React-Router | Styled-components | Tailwind | CSS3 | CSS-module | SCSS | HTML | NPM | Yarn | Figma | prettier | eslint

Projects

Rick and Morty Wiki · [Github](#) Study Project 01/2024 - Current

The project is an informative website dedicated to the "Rick and Morty" animated series universe. It provides users with detailed information about characters, locations, and episodes, presented in an intuitive and user-friendly interface.

- Users can explore information about characters, locations, and episodes through detailed navigation.
- Necessary data is retrieved from the backend through GraphQL and Apollo Client, providing a fast and efficient experience.
- Users can customize the visual experience by changing themes, thus offering a personalized interface.
- UI components are animated to provide a pleasant and engaging user experience.

Technologies Used: TypeScript · React · React-Router · Vite · Framer Motion · ApolloClient + GraphQL Code Generator · Tailwind

Currency Exchanger · [Github](#) Study Project 01/2024 - Current

The project is a currency exchange application that allows users to request data from a server for currency conversion. The application's interface enables users to select desired currencies, and based on these selections, corresponding conversions are performed.

- App can request current currency data from an external server, ensuring constant updating of exchange rates.
- The application allows users to convert amounts between selected currencies, utilizing real-time exchange rates provided by the server.
- The application's interface offers an intuitive experience, facilitating efficient currency selection and conversion.

Technologies Used: TypeScript · React · Vite · Tailwind · Axios · ReactQuery

Dictionary · [Vercel](#) · [Github](#) Study Project 07/2023 - 07/2023

Simple React application that, based on the word entered by the user, requests information from the API and displays it.

- With the help of SWR from Vercel I made the API requests
- With the help of Tailwind, I added the necessary styles and implemented the theme change

Technologies Used: JavaScript (ES6) · React · React-Router · CSS3 · SCSS · CSS-modules · React Redux , Redux Toolkit · Git · Github

Task Manager (Todo) · [Vercel](#) · [Github](#) Study Project 06/2023 - 06/2023

React app with the following features:

- Adding the task
- Indication of the number of unsolved tasks
- Deleting complete tasks
- Filtering tasks by category (complete, incomplete, all)
- Request tasks from the improvised API

Technologies Used: JavaScript (ES6) · React · React-Router · CSS3 · SCSS · CSS-modules · React Redux · Redux Toolkit · Git · Github

Employment History

Directorate of Social Assistance and Family Protection

• Head of the Personal Assistance Service (2022 - 2023)

Skills: Responsibility · Planning · Management

• Head of the Home Care Social Service (2020 - 2022)

Skills: Responsibility · Planning · Management

• Community Social Worker (2019 - 2020)

Skills: Communicable · Responsibility
